CampusCart Project Submission

Project summary, repository and hosted links, and illustrative client-side UI mockups

1. Project Overview

CampusCart is presented as a campus-focused marketplace concept for students to list, discover, and enquire about pre-owned items such as books, electronics, study materials, and accessories. The aim is to make campus buying and selling easier through a single online interface.

2. Repository and Hosted Frontend

GitHub repository: https://github.com/minumaria222/CampusCart

Expected GitHub Pages URL: https://minumaria222.github.io/CampusCart/

A successful GitHub Actions run was reported during setup. The hosted URL should still be opened and checked before submission. GitHub Pages serves the frontend only; backend APIs, authentication, and database-dependent features require a separately deployed backend and correct configuration.

3. Technologies Identified

From the supplied client package configuration: React 18, Vite 6, React Router, and Lucide React icons. The frontend build script is `npm run build`. Backend and database implementation details should be confirmed from the repository before making claims about their production status.

4. Main Client-Side Views

The following composite image contains illustrative UI mockups for a marketplace homepage, student login, create-listing form, and product-details view. These are design mockups created for presentation and are **not actual screenshots captured from the running application**. Use actual application screenshots instead if the evaluator specifically requires evidence from the deployed project.

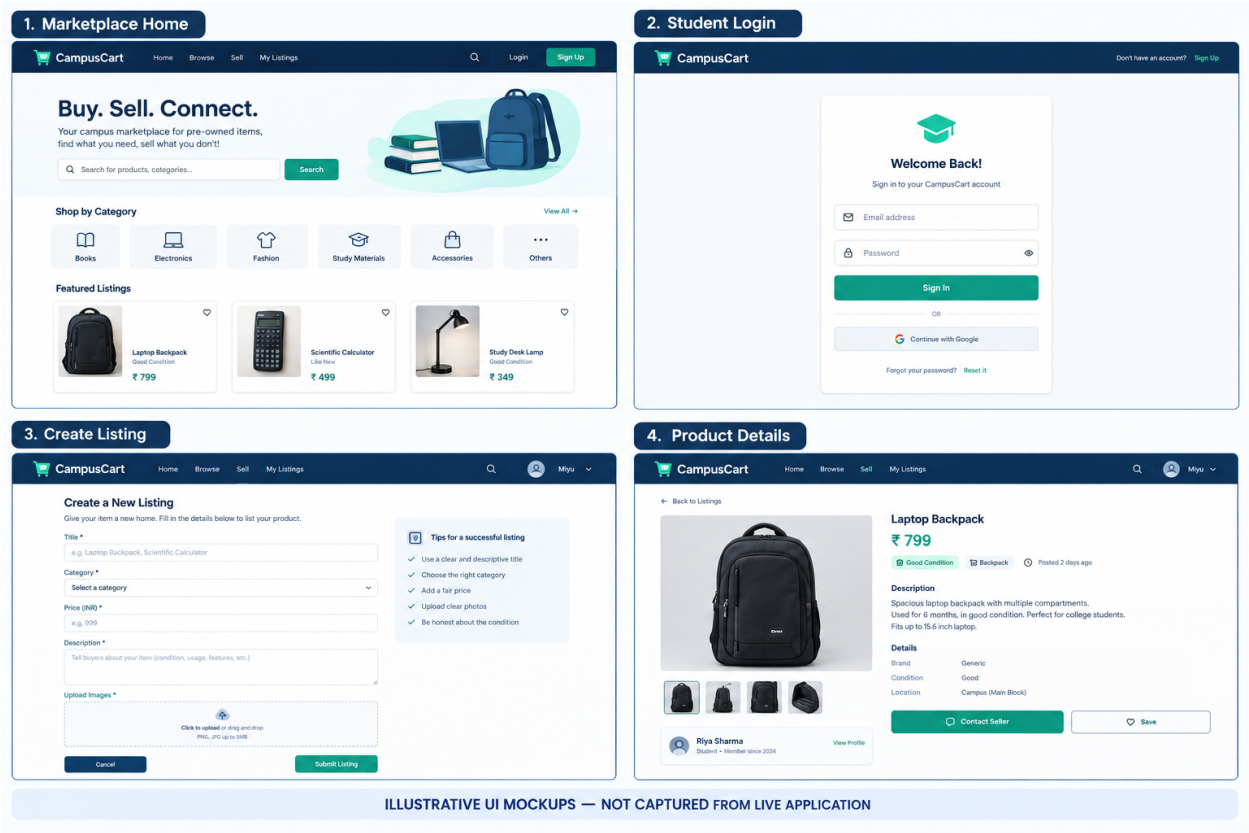

Figure 1. Illustrative CampusCart client-side interface mockups (not captured from the live application).

5. Documentation

The repository is reported to contain `CampusCart_SRS.pdf`. Attach that existing SRS PDF separately in the submission portal if requested. This submission document is a project summary and mockup appendix; it does not replace any institution-specific final report template or the original SRS.

6. Final Submission Checklist

Item	Status / action
Public GitHub repository	Provide the repository link above; ensure it opens while signed out.
Hosted project link	Provide the GitHub Pages URL after checking that it loads.
Project report/documentation	Attach this PDF and the existing CampusCart_SRS.pdf if required.
Major client-side screenshots	This PDF includes clearly labelled illustrative mockups. Replace or supplement with genuine app screensho
Functionality verification	Test the homepage and any login/listing features; don't claim backend features work unless verified.

Prepared from the project details supplied in this conversation. Verify all links and implementation claims before final submission.
